

On-Site Hole Boring Machine

This portable boring machine is designed for on-site machining of bores and holes. It features a robust construction with a motor-driven rotating boring bar and adjustable supports for secure mounting.

Product Overview

Portable Precision On-Site

This portable boring machine is specifically engineered for on-site field maintenance, offering a versatile solution for repairing medium to small-sized pipe and axle pin holes. Designed with an aluminum alloy frame and powerful two-speed motors, it provides exceptional stability and performance in demanding environments. Its lightweight, single-operator design significantly enhances efficiency for construction machinery maintenance.

Key Features

Design Highlights

- Portable, lightweight design for single-person operation
- Aluminum alloy frame construction
- Two-speed motor system
- Optimized for field maintenance

Suitable Applications

Excavators, Loaders, Cranes, Construction Machinery, Heavy Equipment Repair

Performance Metrics

Performance Highlights

2 speed
