

One-Way Flow Control Check Valve

This check valve is designed to allow fluid flow in only one direction, preventing backflow. Its robust construction with a hinged disc mechanism ensures reliable operation in demanding industrial applications.

Overview

Reliable One-Way Flow Control

This one-way flow control check valve is engineered to ensure fluid flows in a single direction, effectively preventing backflow within industrial pipelines. Featuring a robust hinged disc mechanism, it provides reliable protection for critical equipment such as pumps and compressors. Its durable construction and precise engineering make it an ideal solution for demanding applications requiring long-lasting performance.

Key Features

Primary Function

One-Way Flow • Backflow Prevention • Equipment Protection

Technical Design

Construction Features

- Robust body construction
- Precise engineering for industrial use
- Durable material selection
- Green painted finish

Mechanism Type	Hinged disc mechanism
-----------------------	-----------------------

Applications

Suitable Equipment	Pipelines, Pumps, Compressors, Industrial Systems
---------------------------	---
