

One-Way Fluid Check Valve

This check valve allows fluid to flow in only one direction. It is a two-port valve used to prevent backflow and protect equipment in fluid systems.

Overview

One-Way Fluid Check Valve

This one-way fluid check valve is an essential component designed to regulate flow in a single direction, effectively preventing backflow within fluid systems. Engineered with a robust two-port design, it ensures reliable operation for both liquid and gas applications. Its versatile construction makes it a critical safeguard for protecting sensitive equipment from reverse flow damage.

Technical Details

Valve Type	One-way / Non-return
Port Configuration	2 ports
Compatible Media	Liquid, Gas

Design Variations

Available Design Types

- Swing Check Valve
- Lift Check Valve
- Ball Check Valve
- Diaphragm Check Valve
