

Open-Air Electric Shuttle Vehicle

This electric vehicle is designed for short-distance transportation. Its open-air design and multiple rows of seating make it suitable for transporting several passengers.

Overview

Eco-Friendly Passenger Transport

The JY-6021 is an electric vehicle designed for efficient short-distance transportation in large venues. Featuring an open-air design with multiple rows of seating, it offers a comfortable and accessible solution for moving passengers. Its electric powertrain ensures quiet, emission-free operation, making it an ideal choice for resorts and parks.
