

Open-Sided Sightseeing Car with Roof

This open-sided car includes a roof structure supported by pillars. It has a multi-seat configuration suitable for transporting tourists or visitors.

Overview

Designed for Tourism and Hospitality

This open-sided sightseeing car is engineered to provide a comfortable and panoramic viewing experience for passengers in parks, resorts, and tourist destinations. The vehicle features a durable roof structure supported by vertical pillars to provide essential shade during operation. With its multi-seat configuration and robust diamond-plate flooring, it is built to handle the daily demands of visitor transportation while ensuring passenger convenience.
