

Open-Top Gondola Railcar for Bulk Materials

This open-top gondola car is designed for transporting bulk materials such as coal, ore, and aggregates. It features a robust steel frame and body, reinforced for heavy loading and unloading.

Product Overview

Robust Rail Transport Solution

The Open-Top Gondola Railcar is specifically engineered for the reliable bulk transport of heavy materials such as coal, ore, and various aggregates. Built with a high-strength steel frame and reinforced body structure, this car is designed to withstand the high-impact demands of industrial loading and unloading environments. It features full compatibility with standard gauge rail infrastructure, ensuring seamless integration into existing logistics chains.

Technical Specifications

Infrastructure Compatibility

- Standard Gauge Trucks
- Standard Railway Couplers

Model Designation	\$-60
Body Construction	Reinforced Steel Frame, Corrosion-Resistant Coating, Heavy-Duty Body

Operations

Primary Cargo

Coal • Ore • Aggregates
