

Ophthalmic Refraction Workstation

This ophthalmic workstation is designed for eye examinations and vision correction procedures. It includes an adjustable chair, a phoropter arm for lens adjustments, and a control panel.

Overview

Comprehensive Ophthalmic Solution

This ophthalmic refraction workstation is a professional-grade unit designed to streamline eye examinations and vision correction procedures. Featuring an integrated adjustable chair, a dedicated phoropter arm, and a centralized control panel, it provides an ergonomic environment for both the practitioner and the patient. This system is engineered to enhance efficiency in diagnostic settings, including visual acuity testing and precise lens adjustments.

Core Components

Key Components

- Adjustable patient chair
- Phoropter arm
- Integrated control panel

Primary Applications

Refraction, Visual acuity testing, Vision correction, Diagnostic procedures

Design & Ergonomics

Design Focus

Ergonomic Design • Patient Comfort • Streamlined Workflow
