

# Organic Waste Treatment System with Diesel Engine

This equipment efficiently processes organic waste. It features a robust feeding system, powerful shredding mechanism, and discharge conveyor.

## Overview

### High-Performance Organic Waste Processing

This advanced waste treatment system is engineered for the high-efficiency processing of organic materials. Designed for reliability in diverse environments, the system features a robust feeding mechanism and a powerful shredding unit to ensure consistent output. The unit is powered by a high-torque diesel engine, allowing for autonomous operation in locations where grid electricity is unavailable.

## Technical Specifications

### System Components

- Robust feeding system
- High-capacity shredding mechanism
- Discharge conveyor belt
