

Outdoor Network Communication Device

The network communication device is housed in a weatherproof enclosure. It is designed for outdoor or harsh environments, providing reliable network connectivity.

Product Overview

Robust Outdoor Connectivity

This outdoor network communication device is engineered for reliable performance in harsh environments. Housed in a durable, weatherproof enclosure, it ensures continuous connectivity where standard equipment might fail. The unit features integrated power management, supporting DC 12V input for versatile deployment in various industrial or outdoor infrastructure settings.

Technical Specifications

Power Input

12 V
