

# Oven Electric Motor

This electric motor is designed for use in electric ovens. It features a wound stator with copper windings, a rotor shaft, and a mounting bracket.

## Product Overview

### High-Performance Oven Motor

This compact electric motor is specifically engineered for reliable operation within the high-temperature environments of electric ovens. It features a robust design with a wound stator utilizing copper windings, ensuring durability and consistent performance. This unit is an ideal solution for both new oven manufacturing designs and maintenance replacement needs.

## Technical Specifications

### Key Components

- Wound stator with copper windings
- Rotor shaft
- Integrated mounting bracket

### Environment

High-Temperature Resistant

### Application Suitability

Electric Ovens, Replacement Parts, New Equipment Design
