Product Overview

High-Performance Tubular Heating Element

This versatile tubular heating element is engineered for reliable performance in both home appliances and industrial heating applications. Constructed from high-quality metal tubing and filled with premium magnesium oxide powder, it offers excellent thermal conductivity and insulation. The design is customizable to meet specific shape requirements, making it an ideal solution for ovens, fryers, coffee machines, and various industrial heating systems.

Technical Specifications

Tube Materials	Carbon Steel, Titanium, Stainless Steel, Copper
Insulation	Magnesium Oxide powder

Certifications

Certifications
UL • VDE • CE • TUV • ROHS

Applications

Compatible Appliances

- Oven
- Convection Heater
- Washing Machine
- Rice Cooker
- Kettle
- Shower Heater
- Coffee Machine
- Fryer
- Cartridge Heater
- Hot Runner

Design Features

Customization

Processed into various shapes according to customer requirements.
