

Overhead Crane with Clamp Attachment

This overhead crane utilizes clamp fixtures to lift steel billets, coils, and other heavy objects. It is often used in steel production lines, warehouses, and steel yards.

Product Overview

Industrial Clamp Crane Solutions

This specialized lifting machinery is built upon a robust double girder overhead crane architecture. It is engineered to integrate seamlessly with various clamp fixtures, making it ideal for the secure handling of heavy steel billets, coils, and similar industrial objects. Designed for high-demand environments, it is a critical asset for steel production lines, large-scale warehouses, and industrial steel yards.

Technical Specifications

Crane Configuration	Double Girder Overhead Crane
Primary Load Handling Device	Clamp Fixture
Rated Lifting Capacity Definition	Sum of the weight of the clamp and the lifting object

Applications

Typical Load Types

- Steel Billets
- Steel Coils
- Heavy Industrial Objects

Suitable Applications	Steel Production, Warehousing, Steel Yards, Material Handling
