

Overhead Line Inspection and Repair Vehicle

This specialized rail maintenance vehicle is designed for overhead line inspection and repair. It is equipped with a raised platform, safety railings, a diesel engine, hydraulic systems, and specialized tools for railway maintenance tasks.

Product Overview

Specialized Rail Maintenance Solution

This overhead line inspection and repair vehicle is engineered specifically for the maintenance of railway infrastructure. Featuring a raised platform with integrated safety railings, it provides secure access for personnel to perform essential overhead line tasks. The vehicle is powered by a robust diesel engine and utilizes advanced hydraulic systems to support a variety of specialized maintenance tools.

Technical Specifications

Track Compatibility	Standard gauge railway tracks
Engine Type	Diesel
Integrated Systems	Hydraulic Systems, Raised Access Platform, Personnel Safety Railings

Operational Capabilities

Core Functions

- Overhead line inspection
- Overhead line repair
- General rail infrastructure maintenance
