

Oxygen-Free Copper Heat Exchanger 16L

High-efficiency oxygen-free copper heat exchanger designed for household electrical appliances. It features a durable construction with robust copper tubing and a compact, space-saving design.

Product Overview

High-Efficiency Thermal Solution

This 16L oxygen-free copper heat exchanger is engineered for high-performance thermal management in household electrical appliances. Featuring 99.9% pure copper construction, it delivers excellent thermal conductivity and superior durability. Its compact design includes integrated mounting flanges, ensuring secure attachment and straightforward installation for water heating systems.

Technical Specifications

Capacity

16 L

Volume

Material Purity	99.9 %
Product Weight	3.16 KGS

Key Features

Performance Highlights	High Efficiency, Hard Oxidation, Excellent Thermal Conductivity, Super Durability
