

# Oxygen-Free Copper Heat Exchanger

This heat exchanger features a rectangular oxygen-free copper tank with integrated copper tubing. The design facilitates efficient heat transfer with high quality and durability.

## Product Overview

### High-Performance Heat Exchange Solution

This oxygen-free copper heat exchanger is engineered for maximum thermal efficiency and long-term durability. Constructed from 99.9% pure copper, it offers excellent thermal conductivity, making it an ideal component for demanding heating applications. Its robust design features hard oxidation resistance to ensure consistent performance and reliability under operational stress.

## Technical Specifications

Material Purity	99.9% Oxygen-free Copper
Weight	1.15 KGS

## Key Features

Core Benefits	High Efficiency, Excellent Thermal Conductivity, Hard Oxidation, Super Durability
