

Packaging Machine Tension Spring

Tension spring component designed for packaging machinery. Constructed from durable spring steel, it provides consistent tension and reliable performance in automated packaging systems.

Product Overview

Precision Tension Spring for Packaging Systems

This high-performance tension spring is engineered specifically for use in automated packaging machinery. Constructed from durable spring steel, it ensures consistent tension and reliable mechanical operation, making it an ideal choice for both new machine construction and maintenance replacements. Its robust design is built to resist deformation, providing long-term reliability in demanding industrial environments.

Technical Specifications

Material	Spring Steel
Design Features	Closed-loop top end, Specialized bottom hooks, High-tension capacity, Deformation resistant

Application

Primary Application

Automated Packaging Machinery • Industrial Maintenance • Machine Construction
