

Packaging Machinery Temperature Probe with Socket Adapter

This specialized electrical component monitors temperature within packaging machinery. It includes a European-style power plug, coiled cable, socket adapter, and a long, thin metallic temperature probe.

Product Overview

Precision Temperature Monitoring

This specialized temperature probe assembly is engineered for high-performance packaging machinery, ensuring precise thermal control during sealing and heating operations. The unit features a durable coiled cable design for flexible installation and a robust metallic probe for accurate sensing. Equipped with a standard European-style socket adapter, it integrates seamlessly into existing electrical control systems, making it an essential component for maintaining consistent process quality.

Technical Specifications

Electrical Standard

European Standard

Key Components

- Temperature sensing probe
- Socket adapter
- Coiled connection cable
- European-style power plug

Model Identifier

PG180-B

Application

Primary Applications

Packaging Machinery, Thermal Sealing, Temperature Control, Industrial Automation
