

Pair Patch Rack for Network Cable Management

This pair patch rack is a network equipment used for connecting and organizing network cables. It is constructed from durable materials, ensuring long-lasting performance in demanding network environments.

Overview

Professional Network Cable Management

The KF.TJ-50 pair patch rack is a dedicated network equipment solution designed for efficient organization and connection of multiple network cables. Built with durable materials, this rack ensures long-lasting performance even in demanding network environments like server rooms and data centers. It provides multiple connection points to simplify patching and streamline your infrastructure setup.
