

Paper Processing Device

This device is used in paper processing. It features a rounded design with a circular element, likely for sensing or material handling.

Product Overview

Precision Paper Processing

This paper processing device is engineered for efficiency and precision in industrial paper handling applications. Featuring a sleek, ergonomic design, it integrates seamlessly into existing production lines to enhance workflow. Its robust construction ensures reliable performance, making it an essential component for optimizing paper processing tasks.

Physical Characteristics

Finish	Glossy
Primary Material	Plastic
Design Highlights	Ergonomic, Rounded Design, Integrated Sensor

Technical Specifications

Color
Green • White
