

Parabolic Dish Antenna

This parabolic dish antenna features a large, dish-shaped reflector for signal transmission. It is constructed from multiple panels supported by a metal frame and mounted on a sturdy pole.

Product Overview

High-Performance Parabolic Dish Antenna

This parabolic dish antenna is engineered for reliable signal transmission and reception in demanding outdoor environments. Featuring a robust multi-panel reflector design supported by a heavy-duty metal frame, it ensures structural integrity and optimal signal focus. The unit is mounted on a stable three-legged base, making it an ideal solution for satellite communication and long-range signal applications.

Technical Specifications

Antenna Type	Parabolic Dish
Usage Environment	Outdoor, Satellite Communication, Signal Reception

Construction & Design

Material	Metal
Reflector Structure	Multi-panel assembly

Mounting & Stability

Stability Features

Heavy-duty frame • Reinforced base

Mounting Type	Pole mount with three-legged base
