

# Parabolic Leaf Spring

This parabolic leaf spring is engineered for enhanced vehicle suspension. The TE30 model provides superior ride comfort and handling compared to conventional leaf springs.

## Overview

### High-Performance Suspension Solution

This TE30 model parabolic leaf spring is engineered for enhanced vehicle suspension, specifically optimized for trailer and RV applications. Its advanced parabolic design ensures a progressive spring rate, providing superior ride comfort and improved handling under varying load conditions. Constructed from high-strength steel, this component delivers excellent durability and reliable load-carrying capacity for demanding automotive use.

## Technical Specifications

Primary Application	Trailer, RV, Automotive
Model Identifier	TE30

## Performance

### Key Features

- Parabolic design for progressive spring rate
- High-strength steel construction
- Optimized for varying load conditions
- Improved handling and ride comfort
