

Parallel Multi Condensing Unit with Semi-Hermetic Compressors

This parallel multi condensing unit is designed for refrigeration applications. The unit features semi-hermetic compressors mounted on a horizontal receiver and includes a control panel with indicators and gauges for monitoring performance.

Product Overview

Industrial Refrigeration Solution

This parallel multi condensing unit features high-performance semi-hermetic compressors mounted on a robust horizontal receiver. It is engineered for demanding industrial refrigeration applications, ensuring reliability and energy efficiency through its parallel configuration. The system is fully integrated with a dedicated control panel, featuring precision gauges and indicators for continuous real-time monitoring of operational parameters.

System Architecture

System Type	Parallel Multi Condensing Unit
Compressor Technology	Semi-Hermetic
Mounting	Horizontal Receiver

Key Features

Instrumentation

- Pressure Gauges
- Performance Indicators
- Integrated Control Panel

Control System	Yes
----------------	-----

Technical Construction

Piping Material	Copper
Application Environment	Industrial Refrigeration, Commercial Cooling, Parallel System
