

# Passenger Bus for City and Intercity Transport

This passenger bus is designed for touring, intercity, and city routes. It features cathode electrophoresis technology and a technology innovation system.

## Overview

### Professional Passenger Transport Solution

This passenger bus is engineered for both city and intercity transit, utilizing advanced monocoque body technology for superior structural integrity. Through precise three-dimensional computer-aided design, the vehicle achieves an optimal balance between weight, stiffness, and durability. Optimized chassis layout improves axle load distribution, ensuring enhanced driving safety and fuel efficiency for various transport applications.

## Technical Specifications

### Performance Overview

**110 km/h**  
Max Speed

**2.3 m<sup>3</sup>**  
Luggage Capacity

|                        |                       |
|------------------------|-----------------------|
| Dimensions (L x W x H) | 7990 x 2350 x 3300 mm |
| Seat Capacity          | 35 seats              |
| Emission Control       | EURO II, EURO III     |

## Market Availability

### Global Export Markets

- Eastern Europe
- North America
- Mid East/Africa
- Central/South America
- Asia
- Western Europe
- Australasia
