

Password Chip and Circuit Board Shredder

This password chip shredder destroys chips and circuit boards found in office equipment. It operates with low noise and can crush chips and boards into powder with a particle size of 0.1mm.

Product Overview

High-Security Data Destruction

The XBF-Chip is a precision-engineered shredder specifically designed for the secure destruction of sensitive password chips and circuit boards. Utilizing advanced grinding technology, it reduces electronic components into fine powder sized at 0.1mm to ensure total data security. Its compact, low-noise design makes it the perfect solution for office environments requiring professional-grade disposal of confidential materials.

Technical Specifications

Output Particle Size	0.1 mm
Primary Applications	Password Chips, Circuit Boards, Sensitive Electronic Components

Operational Features

Control Mechanism	Intelligent automated crushing process
Noise Level	Low noise operation

Maintenance

Design Focus	Simplified maintenance architecture
Longevity Protection	Yes
