

PB840 Ventilator System

The PB840 ventilator system is a respiratory support device designed for a wide range of patients, from neonates to adults. It offers advanced ventilation modes and real-time monitoring of respiratory parameters.

Overview

Advanced Respiratory Support

The PB840 ventilator system is a sophisticated respiratory support device engineered to accommodate a wide range of patients, from neonates to adults. It features a user-friendly interface with a high-resolution display for real-time monitoring of critical respiratory parameters, waveforms, and trends. Designed for clinical versatility, the system supports multiple ventilation modes and integrates advanced monitoring capabilities like capnography and pulse oximetry to ensure comprehensive patient assessment.

Clinical Capabilities

Patient Compatibility

Neonates • Adults

Ventilation Modes

Volume Control, Pressure Control, Spontaneous

Monitoring & Safety

Integrated Monitoring

- Capnography
- Pulse Oximetry
- Real-time Waveforms
- Respiratory Trends

Safety Alarms

- Pressure Alarm
- Volume Alarm
- Apnea Alarm

Design & Ergonomics

Mobility

Mounted on a mobile cart for easy transport and positioning within the clinical environment.
