

PC PMMA LED Lampshade Extrusion Machine

This extrusion machine is designed for producing single or double color PC and PMMA LED lampshades. It features precise temperature control, stable extrusion rates, and efficient cooling systems.

Product Overview

High-Efficiency LED Lampshade Extrusion System

This advanced extrusion machine is specifically engineered for the production of single and double-color PC and PMMA LED lampshades. By utilizing specialized screw designs and integrated online precision cutting technology, the system ensures high-quality output with superior transparency and light transmittance. It is a robust solution designed to increase production efficiency while maintaining strict tolerances and clean product finishing.

Technical Capabilities

Key Processing Features

- Online precision cutting (chip-less)
- Specialized screw design for optimized plasticizing
- High light transmittance and transparency output
- Vibration mark and crystallized dot prevention

Compatible Materials	PC, PMMA
Cutting Accuracy	0.5 mm

Certifications

Standards and Compliance

CE
