Product Overview

High-Performance Irrigation Solution

This PE braided irrigation hose is engineered for efficient water conveyance in demanding agricultural environments. Featuring a reinforced braided construction, it offers superior pressure resistance and long-term durability. The hose is designed to be flexible for easy installation across various field layouts while resisting UV degradation and chemical exposure.

Technical Specifications

Material	Polyethylene (PE)
Construction	Reinforced Braided
Key Features	UV Resistant, Chemical Resistant, Flexible, High Pressure Resistance

Applications

Primary Applications

- Drip irrigation systems
- Sprinkler systems
- General agricultural water transfer

Sustainability

Eco-friendly
