

PE Foam Slitter Rewinder Machine

This machine is designed for slitting and rewinding PE foam rolls with precision. It converts large rolls into smaller, manageable sizes suitable for packaging and insulation.

Overview

High-Efficiency Foam Conversion

This PE Foam Slitter Rewinder is engineered for the precise conversion of large PE foam rolls into smaller, manageable sizes. Designed with a robust frame and high-precision slitting blades, it ensures clean, accurate cuts across various foam thicknesses and widths. The integrated rewinding mechanism maintains consistent tension for tight, even rolls, making it an essential solution for packaging and insulation manufacturing.

Technical Capabilities

Key Features

- Robust frame construction
- Precision slitting blades
- User-friendly control panel
- Adjustable speed and tension settings
- Handles various foam thicknesses

Primary Functions

Slitting, Rewinding, Roll Conversion

Applications

Target Applications

Packaging • Insulation
