

PE PP Film Washing Granulator System

This system is designed for washing and granulating PE and PP films. It efficiently processes plastic films, transforming them into granules suitable for reuse.

Overview

System Overview

This industrial-grade system is specifically engineered for the comprehensive washing and granulating of PE and PP plastic films. It streamlines the recycling process by integrating pre-washing, crushing, washing, drying, and granulating into a single, cohesive production line. Designed for continuous operation, the system ensures high-quality output suitable for immediate industrial reuse.

Technical Capabilities

Process Stages

- Pre-washing
- Crushing
- Washing
- Drying
- Granulating

Compatible Materials

PE Film, PP Film

Operational Features

System Design

Continuous Operation • Robust Construction • Advanced Control System
