

Pebble Grab Core Drill APFCBR-XZ

This specialized construction machinery tool is engineered for efficient core sampling and drilling in pebble-rich or unconsolidated soil conditions. The pebble grab mechanism facilitates effective removal of drilled material, enhancing drilling speed and precision.

Overview

Specialized Core Drilling Solution

The APFCBR-XZ Pebble Grab Core Drill is a specialized construction tool engineered for efficient core sampling and drilling in challenging pebble-rich or unconsolidated soil conditions. It features a robust construction designed for durability and reliability in demanding geotechnical and foundation construction environments. Equipped with a built-in gripper mechanism, this tool facilitates effective removal of drilled material, significantly enhancing drilling speed and operational precision.

Technical Specifications

Structural Features

- Cutting tool for picks
- Built-in gripper mechanism

Model Number	APFCBR-XZ
Applicable Formations	Pebble Layer, Unconsolidated Soil
Customization	Yes
Customization Note	Product can be customized according to specific customer requirements.
