Product Overview

Specialized Pebble Drilling Solution

The APFCBR-XZ Pebble Grab Core Drill is a specialized construction tool engineered for efficient rock drilling and piling applications. Designed specifically for pebble-rich geological formations, it features a robust build and an integrated gripper mechanism to ensure reliable performance. This tool is ideal for foundation work, infrastructure development, and geological exploration tasks requiring high precision.

Technical Specifications

Structural Features

- Cutting tool for picks
- Built-in gripper mechanism

Applicable Formation

Pebble layer

Customization

Yes

Customization Note

Product can be customized according to customer needs.
