

Pedal-Operated Spot Welding Machine

This pedal-operated spot welding machine provides efficient and precise spot welding. It features adjustable welding parameters and hands-free pedal operation for optimal control.

Overview

DN Series Pedal-Operated Spot Welding

The DN series pedal-powered spot welding machines are engineered for efficient and precise spot welding across various manufacturing applications. Featuring a robust construction and user-friendly pedal operation, these machines allow for hands-free control to enhance operator productivity. With adjustable welding parameters and integrated safety features, they provide a reliable solution for automotive and metal fabrication industries.

Operation & Control

Operation Method

Pedal-Powered • Hands-Free Control

Welding Type

Spot Welding

Technical Features

Safety Systems

- Operator protection shields
- Safe working environment design

Adjustable Parameters

Yes

Applications

Target Industries

Manufacturing, Automotive, Metal Fabrication

Material Compatibility

Suitable for various materials and thicknesses
