

Pellet Roasting Production Line

This production line utilizes advanced pellet technology for roasting. It was put into operation in August 2010 with a 1.4 million t/a scale.

Product Overview

Industrial Pellet Roasting Capability

This industrial pellet roasting production line is designed for large-scale operations, featuring a robust belt-based roasting system. Engineered to meet high-volume production demands, the facility was successfully commissioned in 2010. It represents a significant advancement in domestic pellet processing technology, capable of handling substantial annual throughput.
