

Peripheral Water Pump

This peripheral water pump is engineered for efficient fluid transfer, generating high pressure at low flow rates. Its durable construction and compact design make it suitable for domestic water supply, pressure boosting, and small-scale irrigation.

Product Overview

Peripheral Water Pump

The Peripheral Pump-IDB is a robust and efficient solution engineered for various fluid transfer applications. Featuring a specialized peripheral impeller design, this pump excels at generating high pressure while maintaining relatively low flow rates, making it ideal for clean water and non-corrosive liquids. Equipped with an automatic pressure switch and pressure tank system, it ensures consistent water pressure for domestic supply, pressure boosting, and small-scale irrigation.

Technical Specifications

Common Applications

- Domestic water supply
- Pressure boosting systems
- Small-scale irrigation

Pump Type

Peripheral

Suitable Liquids

Clean Water, Non-corrosive Liquids

Performance Features

Performance Highlights

1 Automatic

Pressure System

1 Quiet

Operation

Included Components

Pressure Tank • Automatic Pressure Switch • Electric Motor
