

Peripheral Water Pump for Clean Water Transfer

This peripheral pump is designed for clean water transfer and boosting applications. It is suitable for domestic water supply, small irrigation systems, and pressure boosting in residential settings.

Product Overview

Reliable Clean Water Transfer

This peripheral water pump is engineered for the efficient transfer of clean water, making it an ideal solution for domestic water supply and small-scale irrigation. Designed for simplicity and economy, it integrates seamlessly with small pressure sets to boost water distribution. Its robust construction ensures reliable performance, provided it is installed in a protected, enclosed environment.

Usage & Application

Primary Applications

- Domestic water supply
- Small pressure sets
- Garden irrigation
- Water distribution

Suitable Liquids

Clean water, Non-abrasive liquids, Chemically non-aggressive

Installation Requirements

Installation Environment

Closed spaces • Weather protected
