

Personal Emergency Response System (PERS)

This personal emergency response system is designed for individuals needing immediate assistance. It consists of a wearable transmitter and a receiver unit to alert contacts during emergencies.

Overview

Safety and Peace of Mind

The Personal Emergency Response System (PERS) is a dedicated safety device designed for individuals who require immediate assistance in the event of a fall, medical emergency, or other urgent situation. This system features a wearable transmitter and a receiver unit, allowing users to send a distress signal instantly with the press of a button. Compact and lightweight, it provides enhanced safety for users both at home and on the go.
