

Pestle Mounting Saddle for Machinery

This saddle provides a secure mounting point for a pestle, enabling controlled movement during operation. It is designed for electrified railway catenary suspension with a diameter of 9 to 20 mm.

Overview

Industrial Mounting Solution

The Pestle Mounting Saddle is a specialized component engineered for secure and stable mounting within machinery and industrial applications. Designed specifically for electrified railway catenary suspension systems, it accommodates metal stranded conductors with diameters ranging from 9 to 20 mm. Its robust construction ensures longevity and reliable performance in demanding industrial environments.

Technical Specifications

Catenary Diameter Range

9 mm²

Min Diameter

20 mm²

Max Diameter

Conductor Compatibility

Metal stranded

Primary Application

Electrified railway catenary suspension
