

PET Bottle Pure Water Filling Machine

This machine is designed for filling pure water into PET bottles. It operates at a high filling speed and maintains an exact fluid level.

Overview

High-Efficiency Filling Solution

This 3-in-1 washing, filling, and capping machine is engineered for high-precision liquid processing. Utilizing advanced bottle-neck block technology, it effectively prevents secondary contamination while offering versatile compatibility for various bottle specifications. Designed with a frequency-controlled electric motor, the system allows for convenient speed adjustments to match diverse production requirements.

Performance Metrics

Production Capacity

3000 bph
Minimum Output

36000 bph
Maximum Output

Technical Features

Core Functions	Washing, Filling, Capping
Technology	Bottle-neck block technology
Motor Control	Frequency controlling electric motor
Compatibility	Yes
