

PET Preform Production Line

This high-speed PET preform production line is engineered for efficient PET preform manufacturing. The robust injection molding machine features advanced control systems, ensuring reliable and consistent output.

Overview

High-Performance PET Preform Production

This high-speed injection molding machine is engineered specifically for efficient PET preform manufacturing. It features robust construction and advanced control systems designed to ensure consistent output and high reliability in demanding production environments. With integrated energy-saving technology and optimized mold design, this system significantly reduces cycle times while maintaining precise control over production parameters.

Performance Metrics

Key Capabilities

260 PET

Model Series

Efficiency Features

Energy-saving technology, Optimized mold design, High-speed operation

Technical Specifications

Application

PET Preform Production • Injection Molding • CSD Production

Control Interface

User-friendly interface for monitoring and parameter adjustment
