

Petrochemical Processing Plant

This is a large-scale petrochemical processing plant. It is designed for refining raw materials into various chemical products.

Overview

Comprehensive Chemical Processing Solutions

This petrochemical processing facility is designed to support the full lifecycle of coal chemical industry operations. It integrates advanced engineering capabilities ranging from research and development to design and construction. The facility is equipped to handle complex chemical production processes, ensuring operational security and efficiency throughout the entire project lifecycle.

Service Capabilities

Core Competencies

R&D, Consulting, Engineering Design, Construction, Operational Training, Facility Security Services

Technical Scope

Industry Focus

Coal Chemical Industry • Petrochemical Engineering

Key Infrastructure

- Distillation Columns
- Industrial Piping Systems
- Chemical Processing Units
