

Petroleum Products Density Tester

This density tester is designed to determine the density of crude petroleum and liquid petroleum products. It adheres to GB/T1884 Test Methods for Density of Petroleum Oils and Liquid Petroleum Products (Density Meter Method).

Product Overview

Precision Density Measurement

The DSHD-1884 Petroleum Products Density Tester is a professional-grade instrument engineered for the accurate determination of density in various petroleum products. Featuring a highly stable, temperature-controlled bath, this device ensures repeatable and precise measurements essential for laboratory and quality control environments. Its intuitive digital interface and streamlined parameter settings make it a reliable solution for meeting rigorous industry standards.

Technical Specifications

Key Features

- Temperature-controlled bath
- Precise temperature regulation
- User-friendly parameter setting
- Repeatable measurement accuracy

Model	DSHD-1884
Interface	Digital Display

Application

Intended Use	Laboratory, Quality Control, Petroleum Testing
--------------	--

Performance

Sample Reading

21.2 °C
Density Value
