

Pharmaceutical Conveyor System

This component is likely used in pharmaceutical equipment. It features a series of parallel, cylindrical rods connected by transverse elements, creating a grid-like structure.

Product Overview

Precision Pharmaceutical Conveyor Component

This high-precision conveyor component is engineered specifically for pharmaceutical manufacturing environments. Featuring a robust grid-like structure of parallel cylindrical rods, it ensures reliable transport and processing of sensitive materials. The design prioritizes durability and hygiene, utilizing corrosion-resistant materials suitable for cleanroom standards.

Technical Specifications

Compliance

Corrosion Resistant • Industrial Grade

| | |
|-----------------------------|--|
| Material Composition | Corrosion-resistant stainless steel |
| Design Configuration | Parallel rod grid system |
| Primary Applications | Pharmaceutical Processing, Material Handling, Cleanroom Operations |
