

Pharmaceutical Film Coating Machine

This film coating machine is designed for pharmaceutical and medical applications, providing precise and uniform coating. It features an advanced control system that optimizes coating parameters, ensuring consistent quality and efficient operation.

Product Overview

High Efficiency Intelligent Film Coating Machine

This intelligent film coating machine is engineered for pharmaceutical and medical applications requiring precise, uniform coating on various solid substrates. It features an advanced control system that optimizes coating parameters to ensure consistent, high-quality results while maintaining efficient operation. Built with high-grade materials, the unit is designed for durability and ease of cleaning to meet stringent industry standards.

Technical Specifications

Key Features

- Advanced control system for optimized parameters
- Adjustable coating speed and thickness
- Closed-loop solvent recovery system
- User-friendly interface

Suitable Applications

Tablets, Granules, Solid Dosage Forms

Compliance and Design

Construction

High-grade materials • Easy cleaning design • Industry standard compliant
