

Pharmaceutical Grade Multi-Housing Filtration System

This high-quality filtration system is designed for pharmaceutical applications. The multi-housing filter unit is constructed with durable stainless steel and features valves and pressure gauges for precise control and monitoring.

Product Overview

Pharmaceutical Grade Filtration

This multi-housing filtration system is engineered for high-purity applications in pharmaceutical and biotechnology manufacturing. Constructed from durable, corrosion-resistant stainless steel, the unit ensures long-term reliability and sanitary performance. The series-connected housing design allows for efficient, thorough liquid filtration, while integrated pressure gauges and valves provide precise process control.

Construction & Design

Material Composition	Stainless Steel
Design Features	Multi-Housing, Series Connection, Corrosion Resistant, Floor Mounted

Operational Controls

Integrated Monitoring

- Pressure Gauges
- Control Valves

Applications

Suitable Industries

Pharmaceutical Manufacturing • Biotechnology
