

Pharmaceutical Granulation and Coating Machine

This machine is designed for efficient and precise processing of pharmaceutical materials. It is ideal for mixing, coating, or granulation processes in pharmaceutical production.

Product Overview

Professional Pharmaceutical Processing

This high-performance pharmaceutical granulation and coating machine is engineered for precision and efficiency in pharmaceutical manufacturing environments. Built with durable stainless steel, it ensures optimal hygiene and operational stability for critical mixing, coating, and granulation tasks. Its robust design supports consistent output quality, making it an essential asset for modern pharmaceutical production lines.

Technical Specifications

Design Features

- Cylindrical drum configuration
- Robust base for vibration reduction
- Industrial-grade processing capacity

Industry Suitability

Pharmaceutical Manufacturing • Material Processing

Construction Material	Stainless Steel
Core Capabilities	Granulation, Coating, Mixing
