

Pharmaceutical Milling Machine

This industrial milling machine is designed for pharmaceutical applications, featuring a stainless steel hopper and a robust frame. It is suitable for grinding and processing various pharmaceutical ingredients to achieve desired particle sizes.

Overview

Industrial Pharmaceutical Milling Solution

This industrial milling machine is engineered specifically for pharmaceutical applications, providing reliable grinding and processing of various ingredients. Built with a robust frame and a high-quality stainless steel hopper, it ensures both stability and durability during continuous operation. The unit features an enclosed motor design to enhance safety and meets stringent hygiene standards required for pharmaceutical manufacturing environments.

Technical Specifications

Operational Controls

- Adjustable milling settings
- Particle size control
- Safe enclosed operation

Construction Material	Stainless Steel
Motor Type	Enclosed Motor

Compliance & Standards

Industry Compliance	Hygiene Standard Compliant, Pharmaceutical Grade
---------------------	--
