

Pharmaceutical Powder Mixing Granulator

This high-efficiency machine is designed for mixing and granulating pharmaceutical powders. It features a stainless steel construction, ensuring granules of uniform size and density for pharmaceutical use.

Product Overview

High-Efficiency Granulation Solution

The Pharmaceutical Powder Mixing Granulator is a specialized machine designed for the high-efficiency blending and granulation of pharmaceutical powders. It features a robust stainless steel construction to ensure the highest standards of hygiene and long-term durability in professional environments. Equipped with intuitive digital controls, this equipment allows for precise operation to achieve consistent granule size and density across various pharmaceutical applications.

Physical Properties

Key Components

- Mixing bowl
- Feeding funnel
- Discharge port
- Digital control panel
- Sturdy base with adjustable feet
- Access step stool

Construction Material	Stainless Steel
------------------------------	-----------------

Certifications & Standards

Applications	Pharmaceutical Powder Mixing, Granule Uniformity, Hygiene Standard
