

Photoelectric Smoke Detector for Residential Use

This photoelectric smoke detector is designed for residential safety. It features a test button for functional verification and a twist-to-remove mechanism for easy battery replacement, alerting occupants in the event of a fire.

Product Overview

Photoelectric Smoke Detector

This photoelectric smoke detector is engineered for reliable residential fire safety. It features an intuitive design with a dedicated test button for quick functional verification and a user-friendly twist-to-remove mechanism that simplifies battery maintenance. Designed to provide early warning, this device is a critical component for home fire protection systems.

Technical Specifications

Sensing Technology

Photoelectric

Key Features

- Test button for functional verification
- Twist-to-remove battery replacement mechanism
- Residential fire detection

Model Number	HS-103
Primary Application	Residential
