

Pillow Block Bearing Unit

This pillow block bearing unit is designed for mounting on surfaces parallel to the shaft axis. It provides support for rotating shafts with combined radial and thrust loads.

Product Overview

Industrial Pillow Block Bearing Unit

This pillow block bearing unit is precision-engineered for reliable shaft support in industrial machinery. Designed for mounting on surfaces parallel to the shaft axis, it effectively manages both radial and thrust loads. The unit comes pre-lubricated and fully sealed, ensuring smooth operation while providing robust protection against environmental contaminants.

Technical Specifications

Mounting Configuration	Parallel to shaft axis
Load Capability	Radial Load, Thrust Load
Maintenance	Pre-lubricated and sealed

Features

Core Benefits

- Durable housing material for industrial use
- Enhanced protection against contaminants
- Reliable support for rotating shafts
- Long-lasting performance in various machinery
