

Pillow Block Bearing Unit

Pillow block bearing unit designed for mounting bearings securely to enable the rotating shaft to be aligned, despite initial installation deviations. Features a robust housing and bearing insert for reliable performance in various industrial applications.

Product Overview

Industrial Pillow Block Bearing Unit

This pillow block bearing unit is precision-engineered to provide reliable support for rotating shafts mounted in parallel with the installation surface. Designed to facilitate easy mounting while accommodating minor initial installation deviations, it ensures smooth and efficient machinery performance. The robust housing and integrated bearing insert offer long-term durability, making this an ideal solution for a wide range of demanding industrial applications.

Technical Specifications

Surface Markings

- a
- b
- d
- e
- f
- g
- h

Mounting Orientation

Parallel with mounting surface

Key Features

Self-aligning, Robust housing, Bearing insert included, Industrial grade
